An infant ≤ 1 year who experienced an episode frightening to the observer, which is characterized by:
- cyanosis or pallor
- absent, decreased, or irregular breathing
- choking or gagging
- change in muscle tone
- altered level of consciousness

Patients experiencing a BRUE should be transported to an appropriate hospital for further evaluation.

Pears
- BRUE was formally known as Apparent Life Threatening Event (ALTE).
- BRUE is formally diagnosed in the ED only when there is no explanation for a qualifying event after a physician conducts an appropriate history and physical examination.
- Always consider non-accidental trauma in any infant who presents with BRUE.
- Even with a normal physical examination at the time of EMS contact, patients that have experienced BRUE should be transported for further evaluation.
- It is important to document sleeping position as parent co-sleeping with child is associated with infant deaths.
