- Ovarian or testicular torsion

---

**Signs** and **Symptoms**
- Pain (location/migration)
- Tenderness
- Nausea
- Vomiting
- Diarrhea
- Dysuria (painful or difficult urination)
- Constipation
- Vaginal bleeding/discharge
- Pregnancy

**Exit to Hypotension/Shock TG**

---

**Notify receiving facility.**
**Contact Base Hospital for medical direction, as needed.**
Pearls
- Diabetic, females, and geriatric patients often have atypical pain, or only generalized complaints. Suspect cardiac etiology in these patients, perform a 12-Lead ECG, and investigate until proven otherwise.
- For chronic abdominal pain, use caution before administering Fentanyl.
- Zofran is not indicated or useful for motion sickness.
- Document the mental status and vital signs prior to administration of anti-emetics.
- Abdominal pain in women of childbearing age should be treated as pregnancy-related until proven otherwise.
- An impression of abdominal aneurysm should be considered with severe abdominal or non-traumatic back pain, especially in patients > 50 years of age or patients with shock/poor perfusion.
- Use caution when considering administration of opioids for pain control.
