

Proposal for a Technical Assistance Grant from the Federal Department of Transportation
Roger Smith, Alamo Improvement Association
December 29, 2020

The Technical Assistance Grant application would focus on preparing a needs assessment and report:

- Pipeline Information Center website Stakeholders Needs Survey
- Assessment/Analysis of the Needs Survey data
- Development of a website template to address those identified needs
- a summary report for presentation, review and determination for follow-up

For the needs assessment, a County Department staff person(s) will be requested to complete an on-line survey.

Once other stakeholders, including Industry and Community Organizations staff person(s), have completed the survey as well, the analysis and assessment of the data will be completed.

The survey results, assessment and template would then be presented to the County Hazardous Materials Commission, TWIC and then the Board of Supervisors for the review. If there is support, a second grant will be applied for to create a Pipeline Information Center website or other identified needs.
