Equipment required
1. Vaccine
2. 23-25 g, 1-inch needle
   a. For larger patients, 1.5-inch needle length may be more appropriate.
   b. See “Needle Gauge/Length and Injection Site Guidance” below for additional information.
   c. COVID-19 vaccine may come as prefilled/ready to administer or require other injection supplies or sizes.

Vaccine Administration Procedure
1. Assess the need for the vaccine in question utilizing the current guidance on that vaccination.
2. Screen for contraindications and precautions of inactivated vaccine (listed below).
3. Collect and review Vaccine Consent/Record of Administration sheet
   a. Confirm that the consent has been signed.
4. To prevent syncope, vaccinate patients while they are seated or lying down and consider observing them for 15 minutes after receipt of the vaccine.
5. Paramedics must maintain aseptic technique when administering the influenza or COVID vaccines.
6. The screening questionnaire must be completed prior to administration of the influenza or COVID vaccine.
7. Wash hands and don gloves.
8. Check expiration date of vaccine.
9. Cleanse the area of the deltoid muscle with the alcohol prep.
   a. Deltoid landmarks: 2-3 finger widths down from the acromion process; bottom edge is imaginary line drawn from axilla
10. Insert the needle at a 90-degree angle into the muscle.
    a. Pulling back on the plunger prior to injection is not necessary.
11. Inject the vaccine into the muscle.
12. Withdraw the needle, and using the alcohol prep, apply slight pressure to the injection site.
13. Do not recap or detach needle from syringe. All used syringes/needles should be placed in puncture-proof containers.
14. Monitor the patient for any symptoms of allergic reaction.
15. Document the following information:
    a. Date of vaccination
    b. Name of patient
    c. Injection site
    d. Vaccine lot number
    e. Vaccine manufacturer
16. Complete appropriate documentation:
   a. **Vaccine Consent/Record of Administration form**: ensure this is completed, retained and appropriately submitted after administration.
      i. Note that medical records/charts should be documented and retained in accordance with applicable state laws and regulations. If vaccine was not administered, record the reason(s) for non-receipt of the vaccine (e.g., medical contraindication, patient refusal). Discuss the need for vaccine with the patient (or, in the case of a minor, their parent or legal representative) at the next visit.
   b. **Vaccine Information Statement**: document the publication date and the date it was given to the patient.
   c. **Patient’s medical record**: if accessible, record vaccine information (above) in the patient’s medical record.
   d. **Personal immunization record card**: record the date of vaccination and name/location of administering clinic.
   e. **Immunization Information System (IIS), or “registry”**: Report the vaccination to the appropriate state/local IIS, if available.
   f. **VAERS**: report all adverse events following the administration of a vaccine to the federal Vaccine Adverse Event Reporting System (VAERS)
      i. To submit a VAERS report online (preferred) or to download a writable PDF form, go to [https://vaers.hhs.gov/reportevent.html](https://vaers.hhs.gov/reportevent.html). Further assistance is available at (800) 822-7967.

17. Give patient vaccine information sheet, using the appropriately translated sheet for non-English speaking client; these can be found at [www.immunize.org/vis](http://www.immunize.org/vis).

19. Advise patient when to return for subsequent vaccination, if appropriate.

A 5/8" needle may be used in patients weighing less than 130 lbs (<60 kg) for IM injection in the deltoid muscle with the skin is stretched tight, the subcutaneous tissue not bunched, and at a 90-degree angle to the skin, although specific differences may be required by various COVID-19 manufacturers.
